

Multiple families declaration in Zones and Boundary Conditions

The proposal is a modification of the use of the *Family_t* node. We propose to have more than one *FamilyName_t* node in the *Zone_t* and *BC_t* nodes. The reserved name for the *FamilyName_t* node is *FamilyName*. We keep this requirement unchanged. Other *FamilyName_t* nodes, as *Zone_t* and *BC_t* children, would have a user-defined name.

```
Zone_t :=
{
...
FamilyName_t FamilyName ;                                (o)

List( FamilyName_t FamilyName1 ... FamilyNameN ) ;      (o)

...
} ;

BC_t :=
{
...
FamilyName_t FamilyName ;                                (o)

List( FamilyName_t FamilyName1 ... FamilyNameN ) ;      (o)

...
} ;
```
