Wall Function Definition

This node gives the user the ability to specify the use of a turbulence model wall function.

Parents:            Base_t/Zone_t/TurbulenceModel_t
Name:               WallFunction
Label:              DataArray_t
Dimensions:         1
Dimension Values: 1
Data: Integer:      1: Wall function type flag
                            0 – None
                            1 – White-Christoph

Notes:
- We probably need to add more wall function types…
- The current definition is only valid by zone, we may want to specify this capability by surface, or even point.
